

THE ALLROUND WHEELCHAIR REACHES NEW HEIGHTS

The ProActiv LIFT, only available from Gerald Simonds, is a genuine revolution in wheelchairs, both at home and at work. At only 17kg the LIFT combines all the benefits of a high quality all round wheelchair with an easy to use, gas powered lifting mechanism. With a simple hand movement and the power of a gas-operated spring, which can be individually adjusted, the user can be raised to the height of a standing adult in seconds.

Just a turn of the hand opens a whole new range of activities. In the office, that file on the highest shelf is now within reach; the counter at the local café is no longer a barrier. At work and at home, conventional furniture and standard kitchen fittings can be used without alteration, giving the user greater flexibility and independence.

Besides the maintenance-free lift engineering and a chassis designed for optimal safety and stability, the LIFT offers all the custom-built advantages of a high quality, all round wheelchair. Brakes, a seven-way adjustable, collapsible back rest and quick release detachable driving wheels all come as standard, allowing the LIFT to be collapsed and transported quickly and easily. For the user's greater comfort, the LIFT also comes as standard with foldable arm rests, with an integrated release mechanism.

The LIFT wheelchair is tailor-made to meet the personal needs of the user, with further options and accessories, including fixed or adjustable push handles, handrims in aluminium or steel with different surfaces, various seat cushions and a selection of steering wheels and tyres for special requirements, all available from Gerald Simonds.

The unique LIFT wheelchair takes high quality, all round wheelchairs to new heights.
